

PASSENGER VEHICLES

The most important functions of coolants:

- protection against freezing
- protection against overheating
- protection against corrosion

NEVER USE CONCENTRATED (UNDILUTED) COOLANTS!

- IT IS RECOMMENDED TO USE THE 50% SOLUTION WITH WATER (1:1)
- NEVER MIX COOLANTS PRODUCED BY DIFFERENT TECHNOLOGIES OR BY DIFFERENT MANUFACTURERS
- COMPLETELY UNLOAD AND CLEAN THE COOLING SYSTEM DURING REPLACEMENT

Types of coolants:

IAT type (traditional antifreeze)

- contains inhibitors based on inorganic salts

HOAT type (hybrid antifreeze)

- contains inhibitors based on inorganic salts and salts of organic acids

OAT type (organic antifreeze)

- contains inhibitors based on organic acids

Si-OAT type

- special technology of silicates and organic acids combination which enable extended service life due to stabilization of silicates, which protect the system against corrosion
